SUMMARY

Senior full-stack engineer with 10+ years building production software for product companies and consultancies. Currently building a TypeScript SDK, a Python/Django API and a high-volume messaging product, and driving AI adoption across the team: AI agents, LLM tool calling and Claude Code tooling. AWS-certified; deep Salesforce platform experience.

EXPERIENCE

Senior Developer, GoMeddo · Netherlands (remote) **Oct 2023 – Present**

- Leading GoMeddo's messaging product (Python/Django, PostgreSQL, Heroku, AWS), connecting WhatsApp, Telegram and Twilio to Salesforce; the largest customer sends **~14M messages a year** (peak 140k/day).
- Building and maintaining the GoMeddo SDK, a TypeScript/Node.js npm package used by the company's React frontends, and the Python/Django API behind it that proxies Salesforce.
- Maintaining an OpenAI-powered sentiment-analysis feature in the messaging product. Stack also includes React, Jenkins CI, AWS Lambda, EC2, RDS, S3 and CloudFormation.
- Developed the company's Agentforce AI agent (pilot participant), used in live customer campaigns: natural-language booking, rescheduling, availability and occupancy queries via LLM tool calling and prompt engineering.
- Created 5 reusable Claude Code skills, rolled out across 20 repositories; one automated a shared Prettier standard that took Apex conformance from ~8% to 100% (**1,136 non-conforming files** → 0).
- Designed the company's internal knowledge base as a concept-linked knowledge map for LLM tools (context engineering). On a benchmarked documentation task it cut tokens by **~40%** and halved lookups while raising answer accuracy from 73% to 91%.

Independent Consultant, JDG CodeWorks · client: ClickBid **Jul 2026 – Present**

- Leading the client's Salesforce Partner Program application and AppExchange security review submission.
- Led a security assessment of an AWS-hosted web application with OWASP ZAP, identifying SQL injection, XSS, CSRF and path traversal vulnerabilities, plus a manual code review of a Salesforce managed package.

Senior Salesforce Developer, Valtech (formerly Appsoftly) · Utrecht, NL **Apr 2022 – Sep 2023**

- Delivered test-driven features and integrations in JavaScript and Apex, including a Slack case-management tool.
- Mentored junior developers and coached client teams through the delivery process.

Senior Salesforce Developer, Ping Identity · Denver, CO **May 2019 – Apr 2022**

- Rebuilt the company's license management system with one other developer, migrating it from a legacy ColdFusion service into Salesforce via Apex and sync jobs; used by sales, support and finance.
- Primary developer on the ground-up rebuild of the customer Support and Partner portals (Experience Cloud).
- Proposed and led the move to Git-based CI/CD (GitHub, Gearset) for 5 developers and 4 admins, cutting deployment time by **up to 40 hours per sprint**.
- Refactored the test suite to mock-based unit tests, cutting runtime by **up to 75%**; introduced TDD with Jest.

Software Engineer, aMind Solutions (now Argano) **Aug 2018 – May 2019**

Developer, Bluewolf, an IBM Company **Oct 2017 – Aug 2018**

Software Developer (freelance), ChargeOver **Mar 2016 – May 2017**

PROJECTS

- LLM knowledge base for infrastructure (2026)**: a Claude Code agent maintains a 300+ page vault for infrastructure reference and orchestration, under a written schema with provenance on every claim, permission guardrails and a secret-leak scanner gating every commit.
- Homelab infrastructure as code (2026)**: Ansible playbooks rebuild two Proxmox servers from bare metal, with a completeness harness and nightly drift detection; Docker, VictoriaMetrics, Grafana.
- Self-hosted Node.js apps (2024–2026)**: an NS (Dutch Railways) API train-disruption notifier posting to Discord; a daily task tracker with webhook escalation and streaks; a PostgreSQL-backed vocabulary trainer.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Apex

Frameworks: React, Node.js, Django, Jest, Lightning Web Components

Cloud & Data: AWS (Lambda, EC2, RDS/Aurora, S3, CloudFormation, CloudWatch, IAM), Heroku, PostgreSQL, Docker

AI: AI agents (Agentforce), Large Language Models (LLMs), OpenAI API, LLM tool calling, prompt engineering, context engineering, Claude Code, MCP

DevOps & Security: CI/CD (Jenkins, GitHub, Gearset), Git, Ansible, OWASP ZAP, application security testing, TDD

CERTIFICATIONS, EDUCATION & LANGUAGES

Certifications: AWS Certified Cloud Practitioner · Salesforce Platform Developer I & II · Salesforce Platform App Builder

Education: Central Michigan University: B.A.A. Computer Science and Entrepreneurship, 2017

Languages: English (native) · Dutch (B1)
